Objective

AI Automation–Focused MERN Stack Developer with 1+ year of experience building Full Stack applications and Skilled in designing AI-powered automation workflows, integrating APIs, email and messaging systems, and orchestrating event-driven processes to reduce manual effort and improve system efficiency. Seeking to contribute to teams where automation, scalability, and intelligent workflows are core engineering priorities.

Projects

Blog Management & Real-Time Support Platform
Built a role-based blog and support platform with real-time communication features using Socket.io. Developed RESTful APIs for blog publishing, user comments, and admin moderation.
Result: Improved response time through live chat and presence tracking, reduced manual admin handling via role-based moderation, and supported scalable content workflows with secure data storage.

SumUpMate-Real Estate Property & Appointment Platform
Developed a full-stack scheduling platform for property listings and agent availability with public booking pages. Integrated automated email/SMS notifications, subscriptions to streamline appointment coordination
Result: Reduced manual scheduling overhead, improved client–agent coordination, and enabled self-service booking with automated confirmations.

Construction Contract Ticket view Management System
Built a full-stack ticket management system to handle complex PVT and contractor workflows with assignment logic and delay-based fine calculation. Implemented multi-stage status tracking and conditions
Result: Improved operational visibility, reduced tracking errors, and enabled accurate reporting of delays and penalties across contractor workflows.

Social Media Automation Workflow n8n
Built an event-driven n8n workflow using webhooks to automate multi-platform social media posting. Incoming post data is published on platform to relevant social media and aggregated into a unified payload. The system forwards consolidated post to a Discord group for confirmation

AI-Powered Blogger Management Automation n8n
Designed a scheduled n8n workflow leveraging OpenAI to generate SEO-optimized blog content at scale. The system creates multiple articles, select top 10 performing content, stores structured data in the database, and schedules automated social media publishing. Enables end-to-end content generation, management

Technical Skills

Frontend
- ReactJs
- NextJs
- JavaScript
- HTML5
- CSS3
- Tailwind

Tools & APIs
- Git,
- GitHub,
- Figma,
- Postman,
- Swagger

Backend
- Node.js
- Express.js
- Socket.io
- RESTful APIs
- JWT Authentication

Deployment
- AWS
- Vercel
- Railways
- Netlify

Ai-Automation
- n8n (workflows, webhooks)
- Event-driven automation

Database
- MongoDB
- PostgreSQL
